Georgian Honey Producing and Exporting Company

BEEKEEPING IN GEORGIA: A 5 500-YEAR-OLD CRAFT

Georgia is said to have the longest tradition of beekeeping in the world.

Honey samples discovered in the village of Sakire, Borjomi (Southern Georgia) are believed to be made by the bees that buzzed in Georgia 5,500 years ago. The 5,500-year-old honey samples are 2000 years older than the samples of Egyptian honey that were considered to be the oldest. <https://en.wikipedia.org/wiki/Honey>

in **1961**

The world learned about the uniqueness of the Georgian honey Bee at the international exhibition in Germany.

97.3 kg of honey

Collected two bee families and won a gold medal.

WHY HONEY FROM GEORGIA?

Georgians were not only the world's first winemakers, but they were also pioneering beekeepers.

Georgia is the homeland of the world-renowned Mountain Grey Caucasian Honey Bee

– the strongest species of bees.

There are a lot of mountain meadows here that are not polluted either by intensive agricultural activity or industry.

About 250 endemic melliferous flowers and plants grow on the territory of our country that give a special taste to our honey.

LAMARIA LCC is a creative Georgian company that develops the production of the **highest-quality honey** in a range of leading Georgian honey regions

We founded Lamaria company for the production and sale of honey in 2021 during the crisis associated with the pandemic. At that time, it became especially clear that **our health directly depends on the quality of the foods we eat.**

Lamaria is the name of the goddess of the hearth and beekeeping in Georgian mythology. This name miraculously embodies all the aspects of our work.

**Growing the
successful startup
together since 2021**

Our apiaries are located in clean surroundings with no commercial agriculture nearby that could grow GMO crops or use harmful pesticides

We work with beekeepers from across Georgia to collect the most delicious raw honey

Many areas in Georgia are free from industrial pollution, such as mountain meadows, which are not polluted by intensive agricultural activity. In addition to honey from these meadows or forests, Georgian beekeepers also produce honey from chestnuts, acacia trees, and other special trees or plants that give it a specific taste.

SAMEGRELO

Region rich in linden trees.

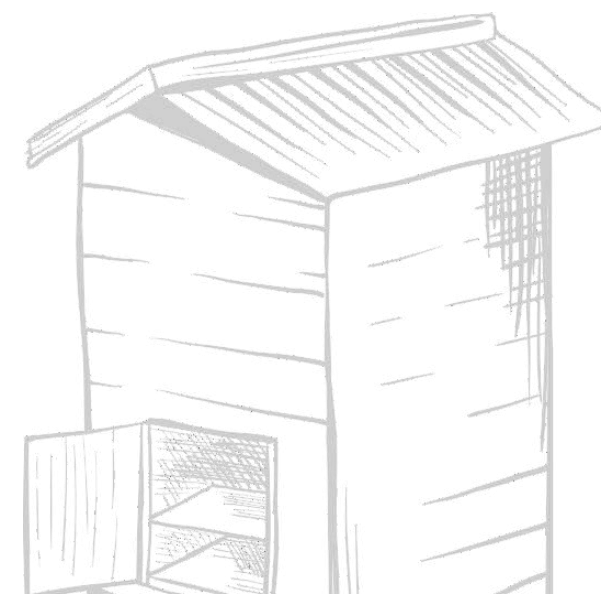

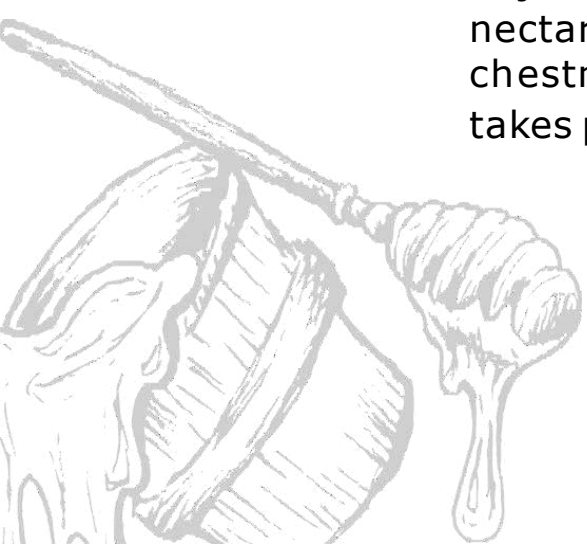

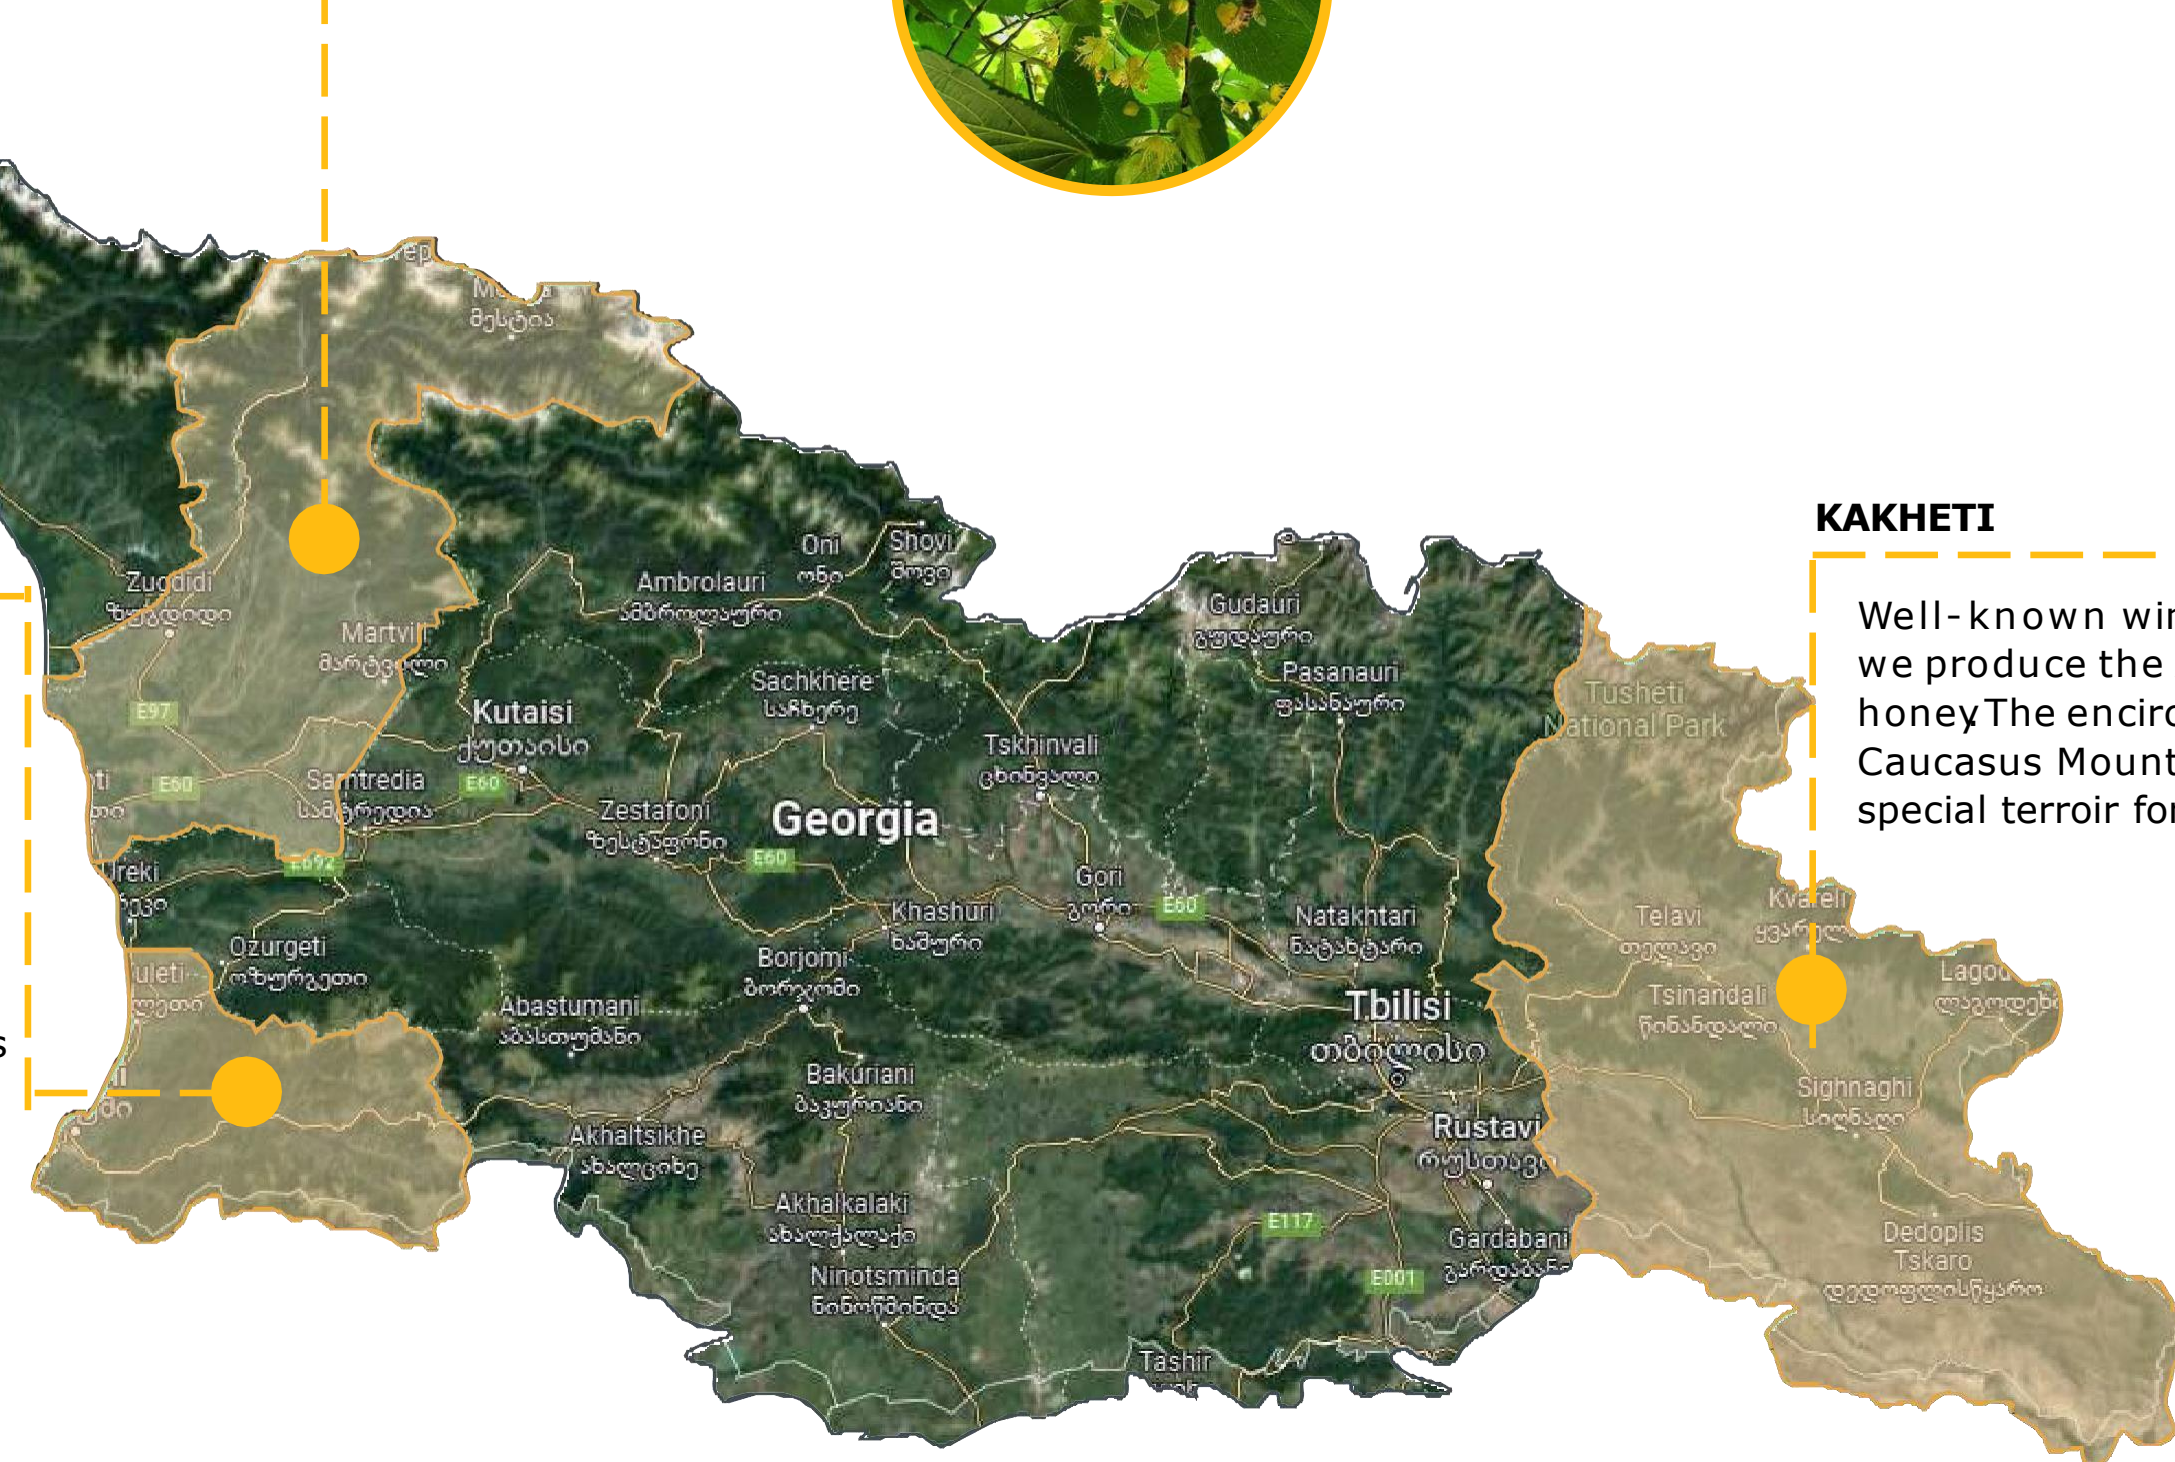

AJARA

Place where mix of chestnut and linden is born. It should be mentioned that we do not mix honey in production. The apiaries are located in the highlands of the Adjara region where bees collect nectar from both linden and chestnut trees. The mixing process takes place naturally in the hives.

KAKHETI

Well-known wine region where we produce the Acacia variety of honey. The encirclement of the Caucasus Mountains creates a special terroir for a plant.

The **rich nature** of Georgia and the local climate are reflected in the honey's **unique taste, aroma** and **properties**.

We offer a selection of the best Georgian honey

Quality is our main priority, that is why not only we produce and sell the honey, but we are the ones who first taste our product.

ACACIA HONEY

We produce this variety of honey in the wine region of Georgia – Kakheti. The encirclement of the Caucasus Mountains creates a special terroir for a plant.

A highly appreciated honey thanks to its fine aroma and its peculiarity to remain liquid much longer than other honey. It is also an excellent sweetener because it is very rich in fructose. The flavour is very sweet with traces of vanilla.

Try it with herbal cheeses, or use it to make pies or cookies.

Acacia

ALPINE HONEY

We produce this variety of honey at an altitude of 1500 meters in the mountains of Javakheti region from the nectar of hundreds of alpine plants.

Our Alpine honey has a unique taste all of its own. Rich and sweet, smooth and creamy. The floral sources that make up this honey pack some serious flavor with medicinal overtones.

A spoonful of this honey in a cup of warm herbal tea makes a wonderful wellness tonic.

Alpine

CHESTNUT HONEY

We produce this variety of honey in the mountains of Adjara region.

Honey has a liquid consistency. It is a dark amber color, with shades of red. The odor is very intense and slightly pungent. Not too sweet. It has a bitter aftertaste.

Try this honey with fresh cheese or some cold cuts.

Chestnut

MIXED CHESTNUT AND LINDEN HONEY

This honey is filtered from the hives of the bees that collect nectar in the forest of chestnut and linden in Adjara near the Black Sea coast.

The color may vary as it depends on the blend. This is our favorite honey – with its complex but not overpowerful woody and warm aroma.

Perfect in the morning for breakfast.

Chestnut & Linden

Since ancient times people have known that **honey is one of the best means of maintaining immunity**

It contains all vitamins of groups B, K, E, C, provitamin A, minerals, and amino acids important for the human body.

High content of inhibin and enzymes fights and inhibits the growth of bacteria, and accelerates the healing of wounds and burns, because it has high antiseptic properties.

Has a strengthening effect and contains a lot of calcium, vitamins C and B, and a lot of iron, so it can be taken as a supplement.

Can be used successfully for stomach and liver ailments. Helps deal with acne. Also has a rejuvenating effect.

Legal Notes

The specification of product is composed based on CODEX ALIMENTARIUS and other relevant EU regulations of food safety and ISO standards demands. The above declarations serve for information purposes only. In particular, they shall not be relevant to define binding specifications for any orders. With respect to any order, the specifications shall be governed by the provisions of the sales contract to be concluded between the parties. Any deliveries are exclusively subject to our general standard terms and conditions in their respectively valid version.

PRODUCT SPECIFICATION

Honey originates from the nectar and saccharine secretions of plants that are gathered, modified, stored, and dehydrated by the honey bee. Honey consists essentially of different natural sugars, with the predominant sugars being fructose and glucose, as well as other substances such as organic acids, enzymes, and solid particles derived from honey collection.

ENZYMES

Invertase, diastase (amylase), catalase glucose oxidase, acid phosphatase.

RAW/INGREDIENTS

100% natural honey

VITAMINS

Traces of the following: B6, C, folate, pantothenic acid, niacin, riboflavin, thiamin.

GMO DECLARATION

The product is not genetically modified nor contains genetically modified processing agents.

MINERALS

Traces of the following: potassium, calcium, magnesium, iron chloride, selenium, sodium, silicon, silica, manganese, sulphur phosphorus, aluminium, zinc and copper.

ALLERGENS AND ADDITIVE INFORMATION

Honey contains 0.3%protein (primarily resulting from pollen) of this 1%is allergenic protein. European Food Standard that a declaration of honey as an ingredient is sufficient acknowledgement of this allergen.

Our honey passes all laboratory tests and European **quality standards**

Our company guarantees the quality of imported honey. Every time honey is imported, samples are taken for inspection by the hygiene station and thus the perfect quality of the imported honey is guaranteed.

Each batch of honey undergoes strict laboratory tests necessary for further export.

We have all the necessary regulatory documents for the sale of Georgian honey to foreign buyers. We hold certificates for honey from Georgia, and all original certificates and certificates are stored with our company and are available.
